

SHIVAM CHAUDHARY

Backend Developer | Generative AI & Agentic AI

Shivamchy076@gmail.com | +91 7667736039 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

EDUCATION

Bachelor of Engineering — Artificial Intelligence & Machine Learning

09/2024 – Present

Jawaharlal Nehru New College of Engineering — Shimoga, Karnataka

PROFESSIONAL EXPERIENCE

Freelance Web Developer — Indalnova

08/2025 – 11/2025

Remote / Kanpur, UP

- Designed and built a full-stack skincare e-commerce site end-to-end (**HTML, CSS, JavaScript, Node.js, Express.js, MongoDB, Supabase**), shipping dynamic product listings and an order-management system as sole developer from requirements through deployment.
- Maintained a stable, incident-free production environment post-launch by resolving **10–15 client-reported bugs and modification requests over 3 months**, keeping a newly-launched storefront (10–15 orders/month) reliable for live customers.
- Owned the project fully — client communication, feature scoping, deployment, and monitoring — for a live, client-facing system still active today.

PROJECTS

AI Commander — VS Code AI Coding Agent [\[GitHub\]](#)

08/2026 – Present

VS Code Extension API, Node.js, Express.js, MongoDB, FastAPI, LangGraph, LLM APIs

- Built a custom **TypeScript VS Code extension** integrated with a **Node.js/Express backend** and a **LangGraph-based agent** to capture and clean terminal error output, then generate **LLM-powered debugging guidance** directly within the developer's IDE workflow, backed by **MongoDB** session storage.
- Enhanced the system in **V2** with **authentication architecture**, **context-aware error analysis**, and a **dedicated frontend dashboard** displaying AI-generated error explanations, risk levels, and prevention recommendations.
- Currently building V3**, integrating a **FastAPI-based agent backend with Model Context Protocol (MCP)** to enable direct log access from hosted applications and expand toward autonomous, environment-aware debugging assistance.

EventHub — College Event Management Platform (Live) [\[GitHub\]](#)

03/2026 – 08/2026

Node.js, Express.js, MongoDB, Mongoose, Redis, JWT, Joi

- Architected a role-based backend (**MVC pattern, JWT auth, Joi-validated REST APIs**) to manage events, teams, and scheduling for **1,000+ concurrent users**, deployed and live in production.
- Cut average database fetch latency from **~700ms to ~100ms (~85% faster)** by introducing **Redis caching** for frequently accessed queries, alongside centralized middleware validation.
- Hardened the API layer by implementing **rate limiting** to prevent abuse and resolving file-upload bugs affecting reliability under concurrent load.

HR AI [\[GitHub\]](#)

08/2026 – Present

Python, LangChain, Groq, Qdrant, FastAPI, Node.js, Express.js, MongoDB, LangSmith

- Built a **RAG-based HR assistant** using **LangChain, Groq, and Qdrant** to retrieve and answer employee queries from company policy documents with context-aware, LLM-generated responses, reducing manual policy lookup.
- Integrated **LangSmith for pipeline observability** and a **guardrails layer to protect against prompt injection and jailbreak attempts**, and architected the backend using **FastAPI and Node.js/Express.js with MongoDB**.
- Currently extending** the system toward **agentic workflows**, enabling employees to directly generate and submit requests (e.g., leave applications) through automated, database-integrated actions.

SKILLS

Languages: Python, JavaScript, Java, C, SQL

Generative & Agentic AI: LangChain, LangGraph, RAG Pipelines, Qdrant, Prompt Engineering, Guardrails, LangSmith, Hugging Face, Gemini API, Groq, MCP (in progress)

Backend Development: Node.js, Express.js, FastAPI, MongoDB, Mongoose, Redis, JWT, REST APIs

Tools & Platforms: Git, GitHub, Postman, Docker, VS Code

HACKATHONS & COMPETITIONS

- 2nd Place**, Mysterio 6.0 Bug Bounty for identifying and exploiting live security vulnerabilities.
- Participated in **5 hackathons/competitions**, including Smart India Hackathon (SIH – Internal Round), IGNITRON 2K25 (GM University, National Level), and Alva's Hackathon.
