

SHIVAM CHAUDHARY

Backend Developer | Generative AI & Agentic AI

Shivamchy076@gmail.com | +91 7667736039 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#) | [LeetCode](#)

EDUCATION

Bachelor of Engineering — Artificial Intelligence & Machine Learning

09/2024 – Present

Jawaharlal Nehru New College of Engineering — Shimoga, Karnataka

PROFESSIONAL EXPERIENCE

Freelance Web Developer — Indalnova

08/2025 – Present

Remote / Kanpur, UP

- Designed and built a full-stack skincare e-commerce site end-to-end (**HTML, CSS, JavaScript, Node.js, Express.js, MongoDB, Supabase**), shipping dynamic product listings and an order-management system as sole developer from requirements through deployment.
- Continuing to maintain a stable, incident-free production environment by resolving **10–15 client-reported bugs and modification requests per quarter**, keeping the live storefront (10–15 orders/month) reliable for ongoing customers.
- Own the project fully — client communication, feature scoping, deployment, and monitoring — for this live, client-facing system, active since launch.

PROJECTS

Git RAG — Agentic GitHub Repository Assistant [\[GitHub\]](#)

08/2026 – Present

Python, LangGraph, LangChain, MCP, Qdrant, FastAPI, Groq LLM, RAG

- Building an **Agentic RAG system** using **LangGraph, MCP, Qdrant, and LLMs** that enables developers to understand and query GitHub repositories in natural language, covering **repository ingestion, code chunking, and vector-based retrieval**.
- Implemented **MCP tool selection and execution** to dynamically route queries, generating **context-aware answers with streaming responses**, and exposed the system via a **FastAPI**-based API for external integration.
- Currently extending** the architecture to support **hybrid retrieval, reranking, and retrieval evaluation** for more accurate, production-grade code understanding.

AI Commander — VS Code Agent [\[GitHub\]](#)

08/2026 – Present

VS Code Extension API, Node.js, Express.js, MongoDB, FastAPI, LangGraph, LLM APIs

- Built a custom **TypeScript VS Code extension** integrated with a **Node.js/Express backend** and a **LangGraph-based agent** to capture and clean terminal error output, generating **LLM-powered debugging guidance** directly within the developer's IDE workflow, backed by **MongoDB**.
- Enhanced the system in **V2** with **authentication architecture, context-aware error analysis**, and a **dedicated frontend dashboard** displaying AI-generated error explanations, risk levels, and prevention recommendations.
- Currently building V3**, integrating a **FastAPI-based agent backend with Model Context Protocol (MCP)** to enable direct log access from hosted applications and expand toward autonomous, environment-aware debugging assistance.

EventHub — College Event Management Platform (Live) [\[GitHub\]](#)

03/2026 – 08/2026

Node.js, Express.js, MongoDB, Mongoose, Redis, JWT, Joi

- Architected a role-based backend (**MVC pattern, JWT auth, Joi-validated REST APIs**) to manage events, teams, and scheduling for **1,000+ concurrent users**, deployed and live in production.
- Cut average database fetch latency from **~700ms to ~100ms (~85% faster)** by introducing **Redis caching** for frequently accessed queries, alongside centralized middleware validation.
- Hardened the API layer by implementing **rate limiting** to prevent abuse and resolving file-upload bugs affecting reliability under concurrent load.

SKILLS

Languages: Python, JavaScript, Java, C, SQL

Generative & Agentic AI: LangChain, LangGraph, RAG Pipelines, Qdrant, Prompt Engineering, Guardrails, LangSmith, Hugging Face, Gemini API, Groq, MCP (in progress)

Backend Development: Node.js, Express.js, FastAPI, MongoDB, Mongoose, Redis, JWT, REST APIs

Tools & Platforms: Git, GitHub, Postman, Docker, VS Code

HACKATHONS & COMPETITIONS

- 2nd Place**, Mysterio 6.0 Bug Bounty for identifying and exploiting live security vulnerabilities; participated in **5 hackathons/competitions** including SIH, IGNITRON 2K25 (GM University), and Alva's Hackathon.
